UML Sequence Diagram

UML First Pass: Sequence Diagram

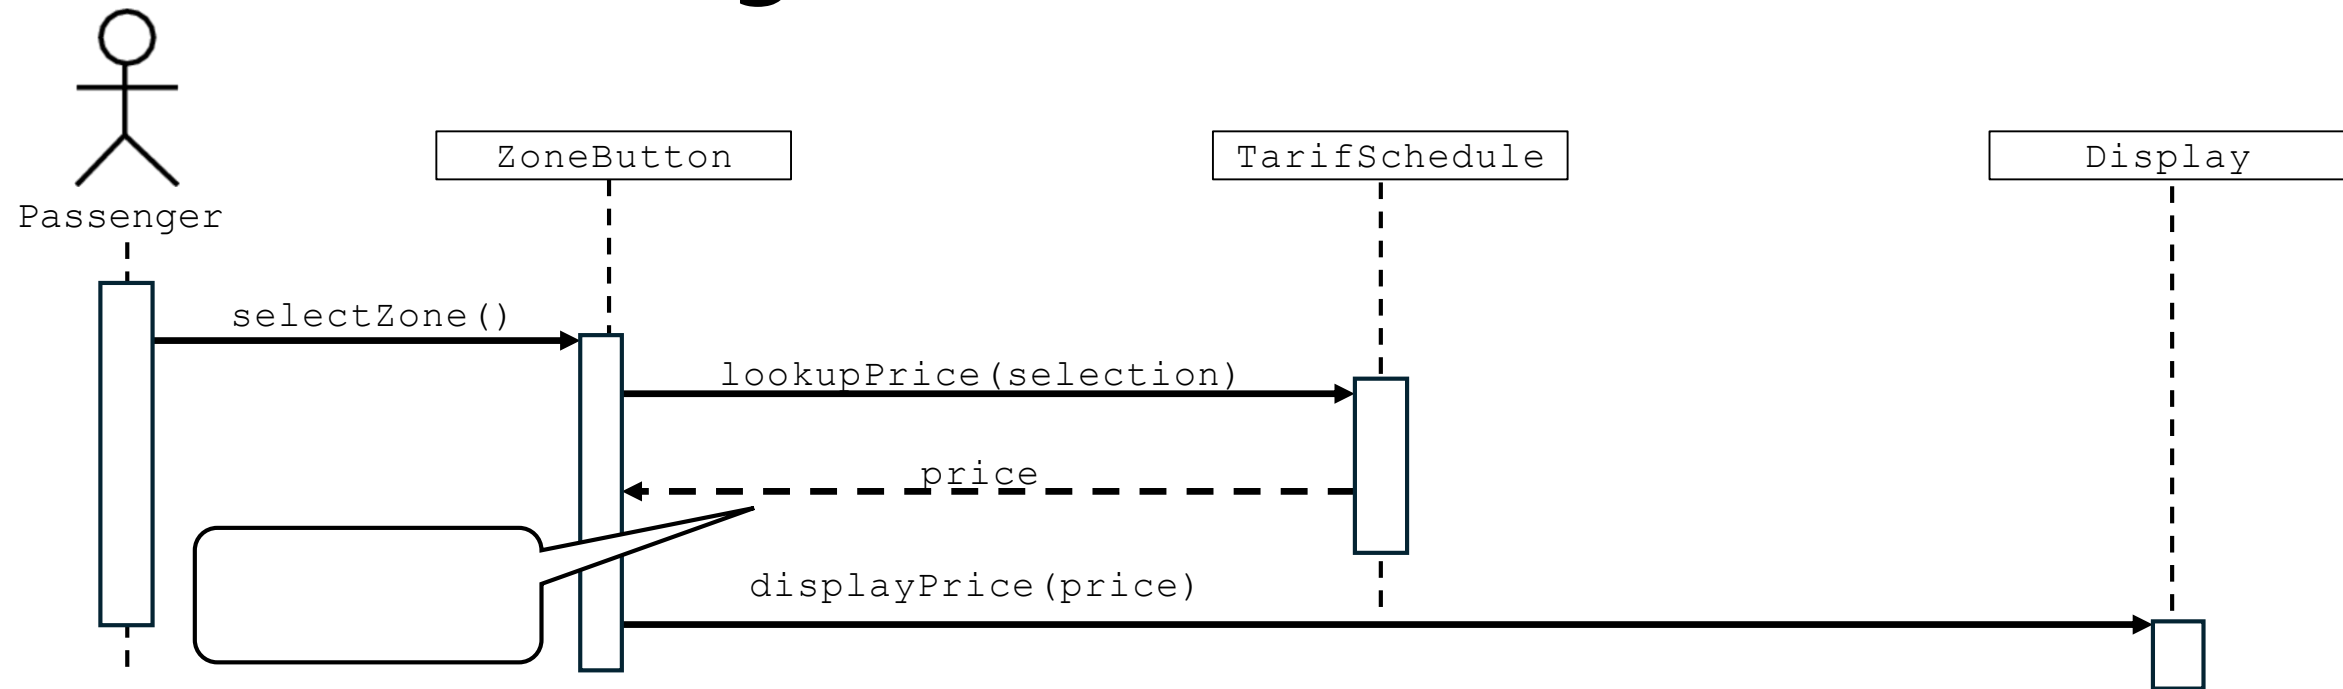

UML Sequence Diagrams

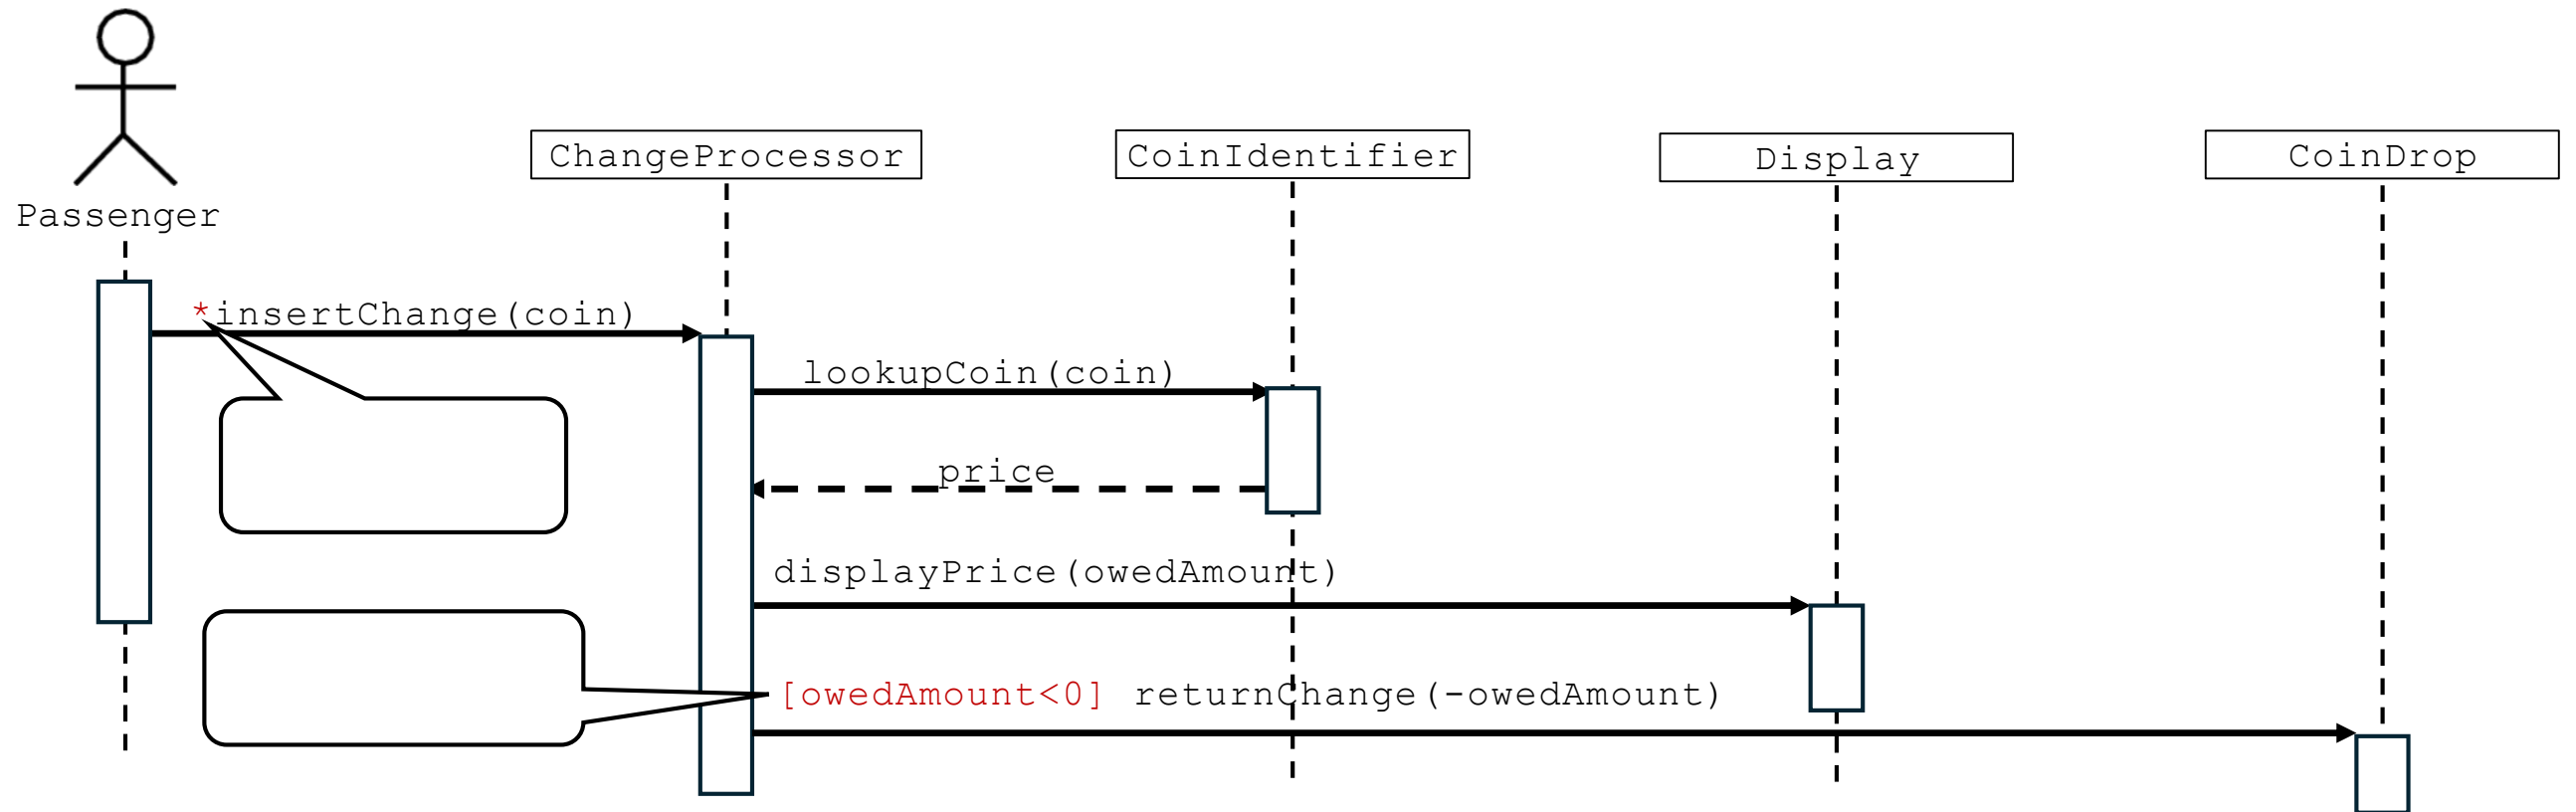

- Used during requirements analysis
 - To refine use case descriptions
 - To find additional objects (“participating objects”)
- Used during system design
 - To refine subsystem interfaces
- Classes are represented by columns
- Messages are represented by arrows
- Activations are represented by narrow rectangles
- Lifelines are represented by dashed lines

Nested Messages

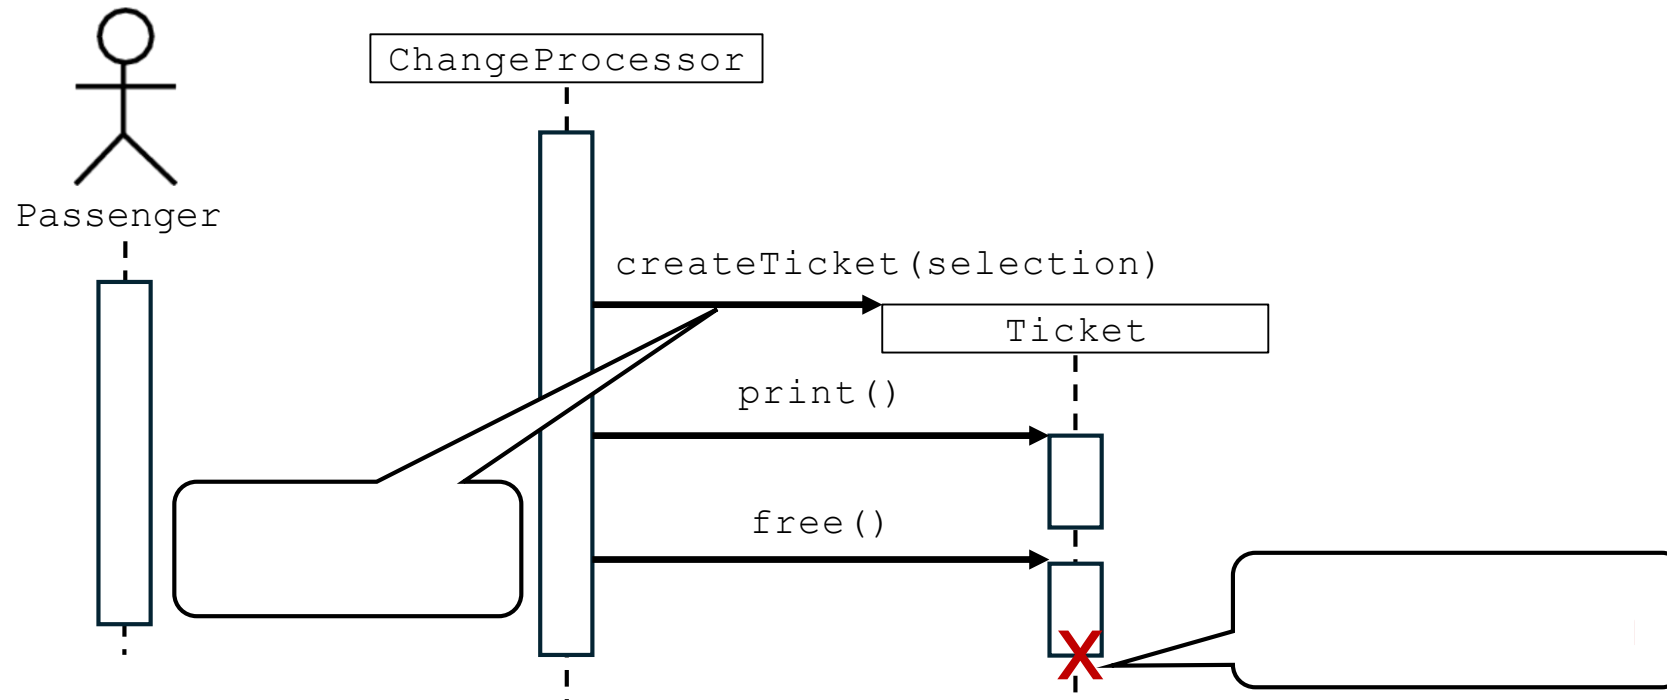

- The source of an arrow indicates the activation which sent the message
- An activation is as long as all nested activations
- Horizontal dashed arrows indicate data flow
- Vertical dashed lines indicate lifelines

Iteration and Condition

- Iteration is denoted by a * preceding the message name
- Condition is denoted by Boolean expression in [] before the message name

Creation and Destruction

- Creation is denoted by a message arrow to the object
- Destruction is denoted by an X mark at the end of the destruction activation
- In garbage collection environments, destruction can be used to denote the end of the useful life of an object

Sequence Diagram Summary

- UML sequence diagrams represent behaviour in terms of interactions
- Useful to find missing objects
- Time consuming to build but worth the investment
- Complements the class diagrams (which represent structure)

Let's Practice Reading Sequence Diagrams

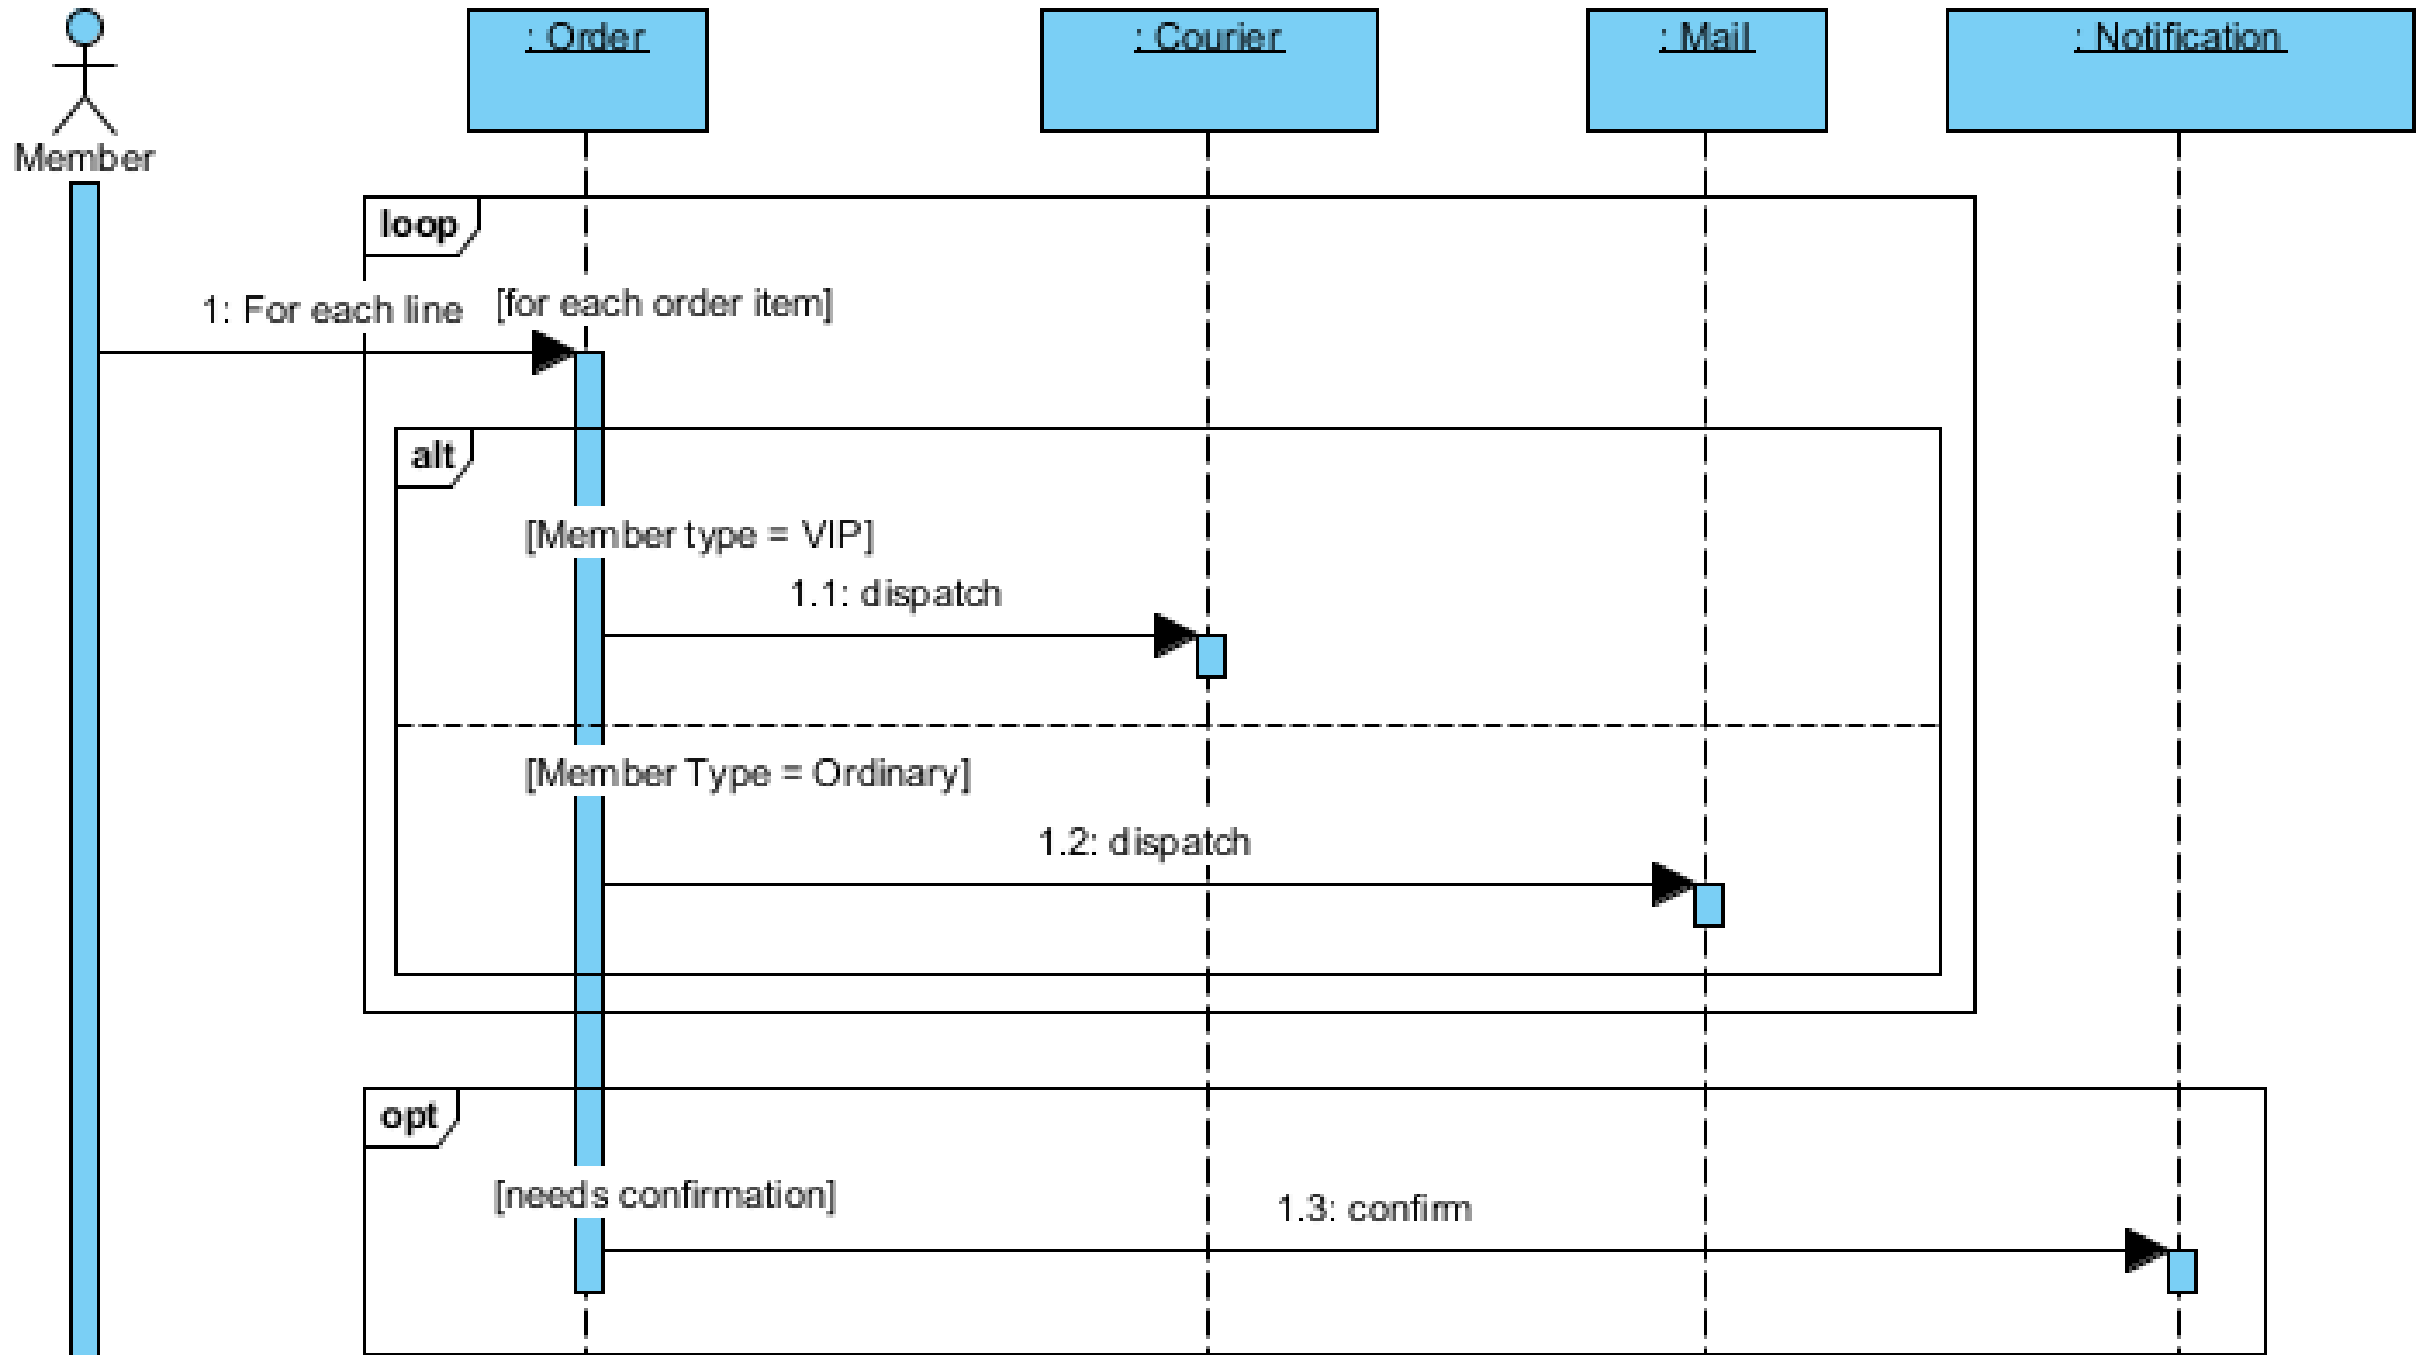

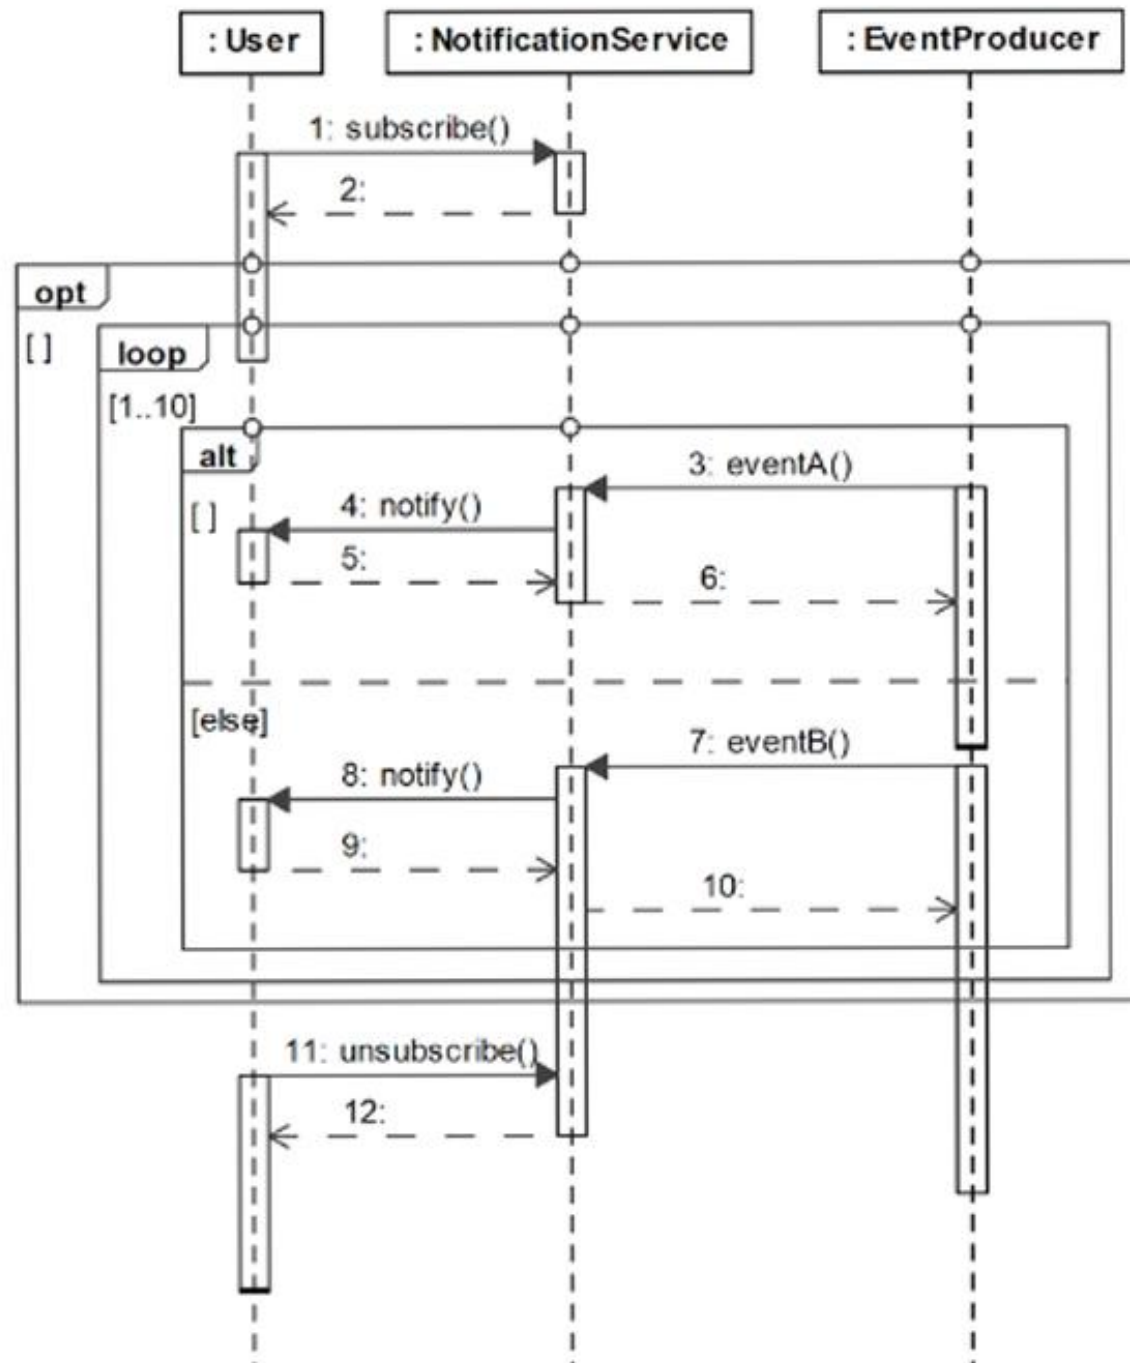

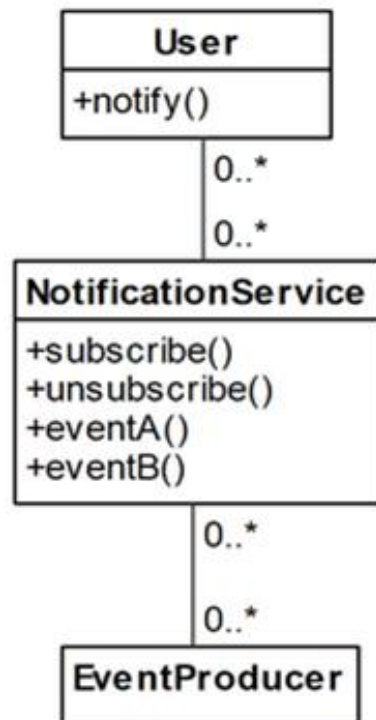

Object Dimension

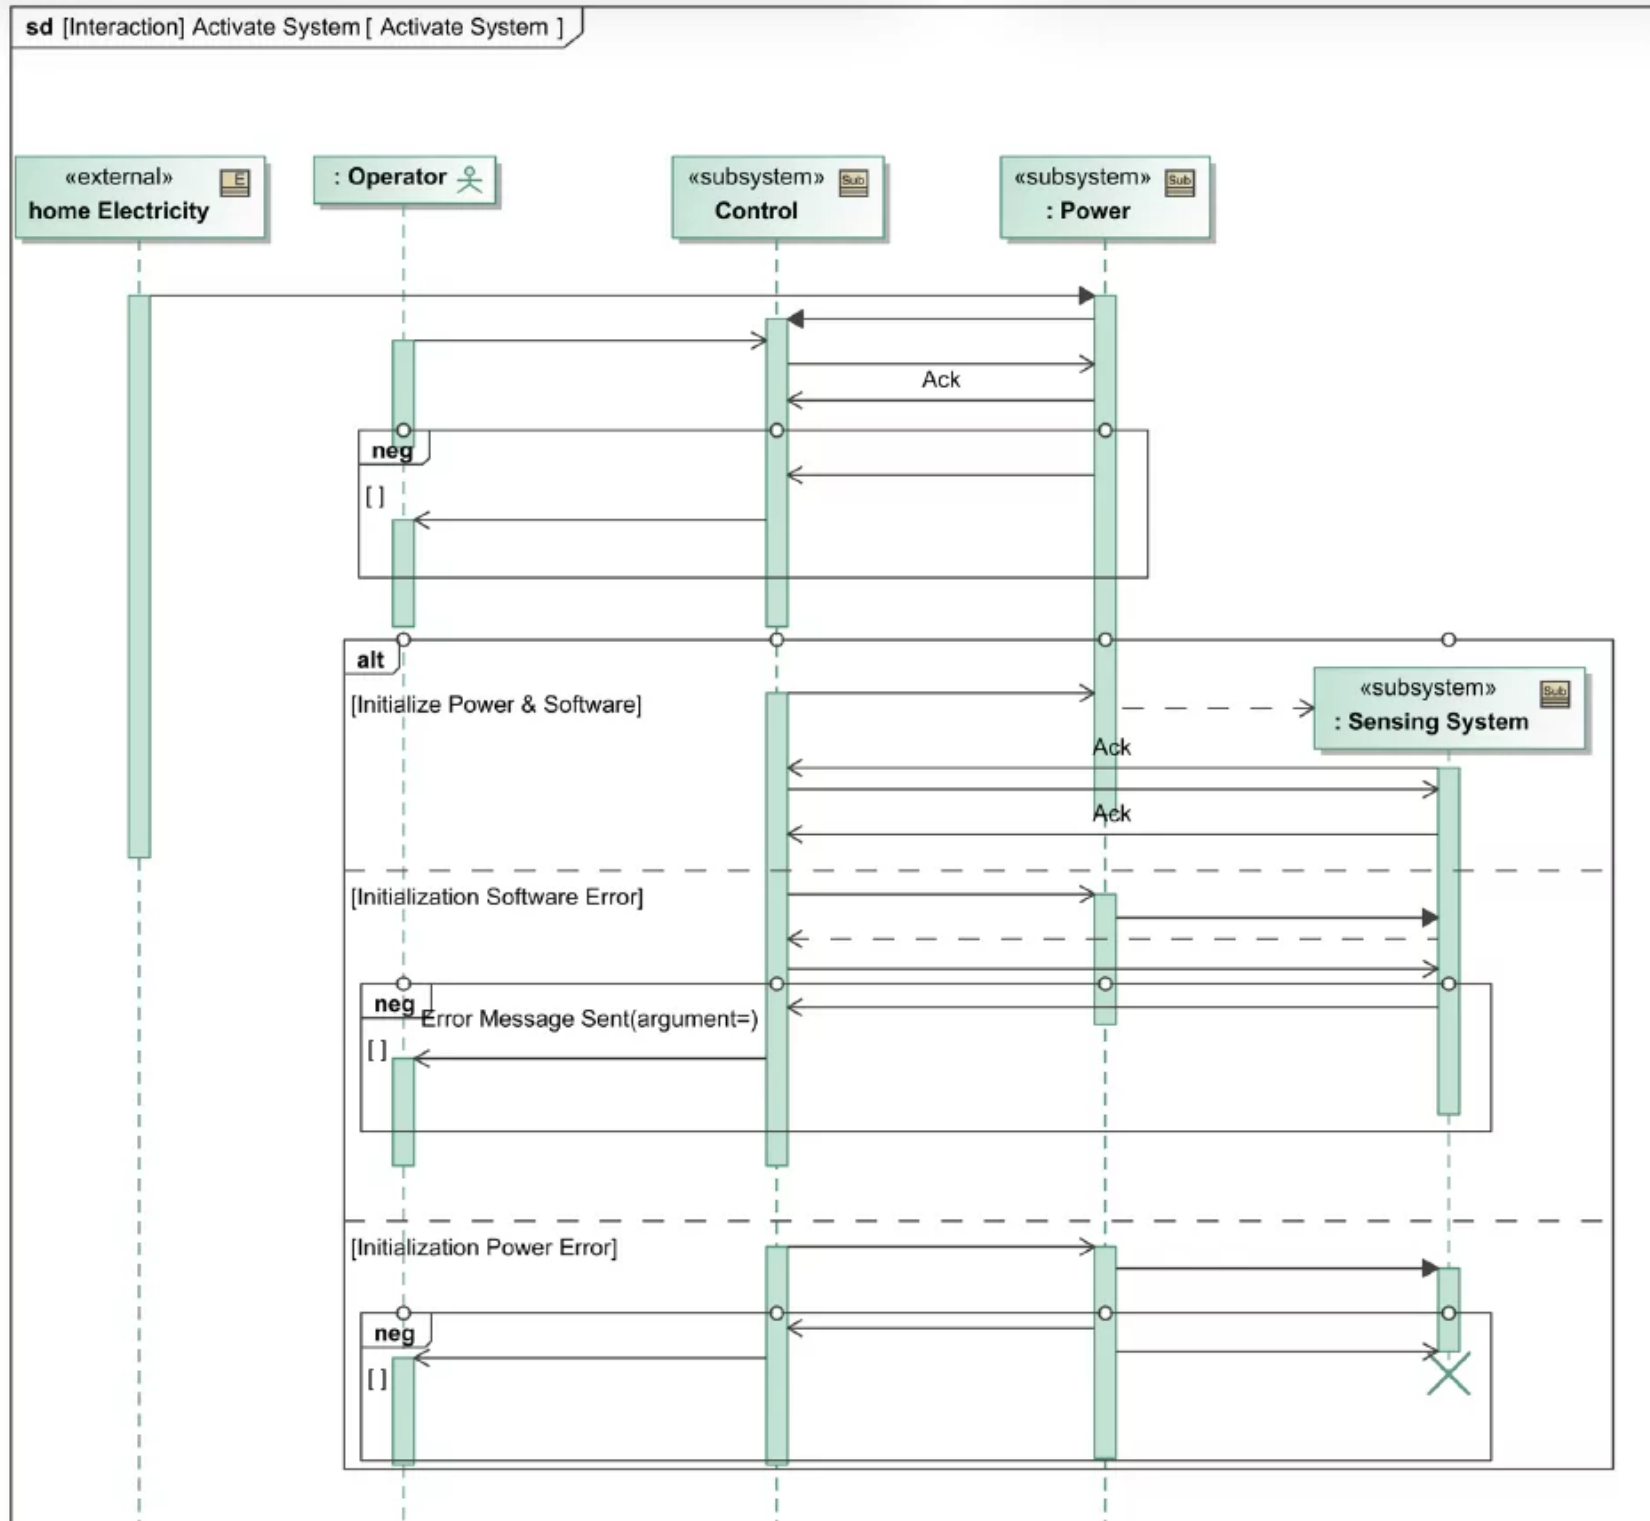

Time Dimension

sd Place Order Scenario

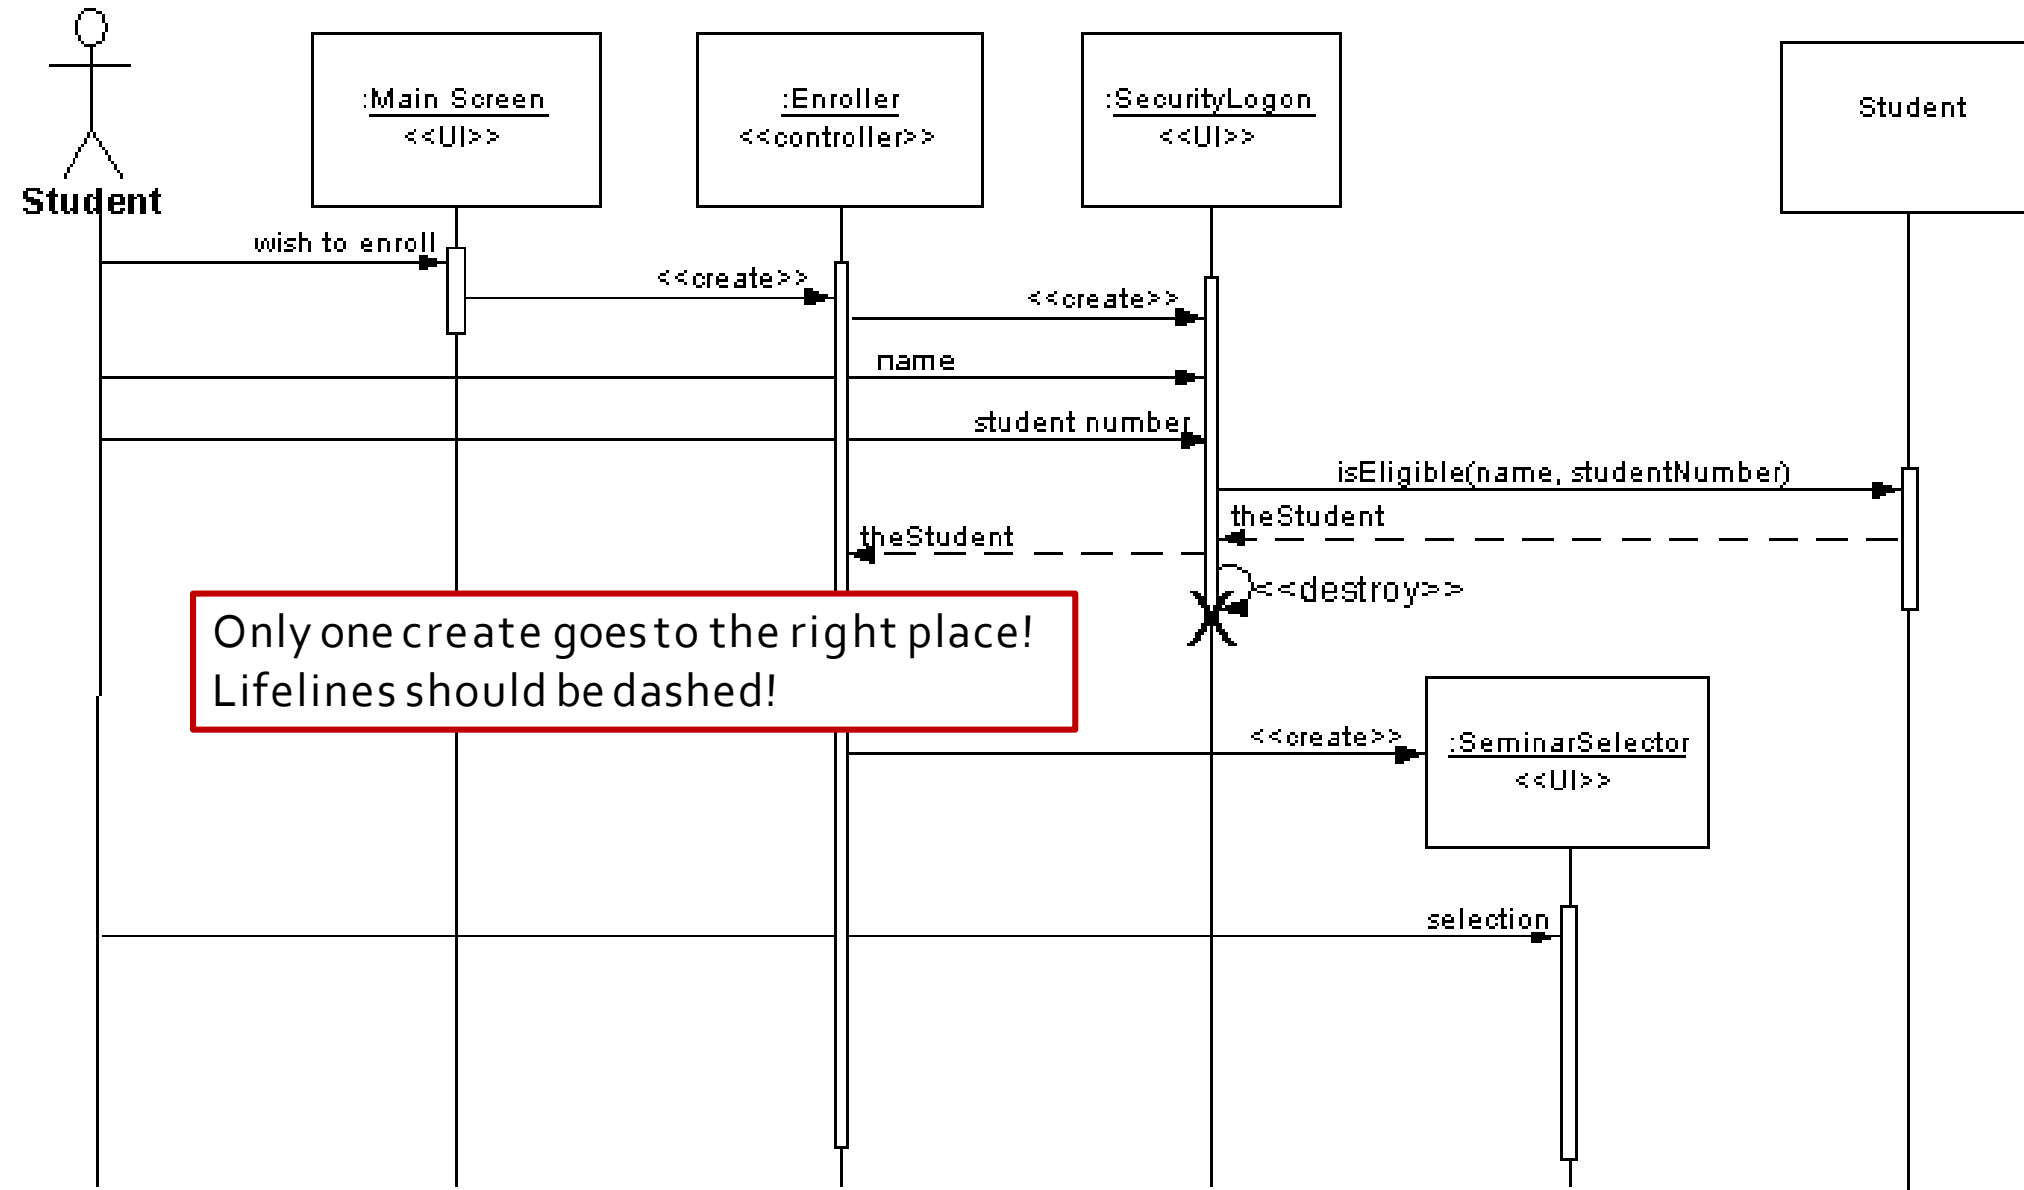

Spot the Mistakes

What's Wrong with This One?

Enroll In Seminar
Basic Course of Action

Only one create goes to the right place!
Lifelines should be dashed!

1. Student indicates wish to enroll

2. Student inputs name and number

3. System verifies student

4. System displays seminar list

5. Students picks seminar
